Hi Eric,

Do you happen to have a list correlating ASPECT flight numbers (or dates) and sites flown?

Thanks so much.

Taim.

No. Unfortunately not. In the n-link we there are flight lines which correspond to icons with the targets. The blink was provided to the email box a few times during the deployment. (On my phone so I don't have it to attach). We were given the KML and we planned based off the target on the map, not the site name. Delgado should be able to do this.

Please send me your cell, I'll call when I land to explain in more detail. Discussions have been had on this.

Subject: ASPECT Mission Summary

Monica, Craig, Bryant, Nick, John...

A short summary in numbers of what the ASPECT mission encompassed:

Missions - 28

Hours flown - 112

Flight lines – 679

Facilities Surveyed

RMP = 134

DW = 456

WW = 105

The data is uploaded into the FTP site. The n-link (attached) will be fully updated later tonight. Delgado has access to the FTP for data releases and products. The support team is heading out tomorrow (13 Sept). The plane remains in your backyard if you do need anything, just light up the ASPECT signal and we have your back. I will be supporting the R6 Harvey ENVL from home, as they need me. If there are any data or media questions, please let us know.

It was a pleasure working with you and your teams. The operations in the REOC were fantastic. Comms from Ops in the field from Nick and John were excellent. You have a great team here.

Monica, next time we schedule a meeting, I will be prepared... and bring a week's worth of clothes!

Have a great one!

R/Kuda
